PROJECTS

Hotel booking website like Airbnb

- Built a fully functional hotel booking application, similar to Airbnb, allowing users to search and book hotels.
- Implemented JWT-based authentication and integrated MongoDB as the database for data management.
- Leveraged AWS S3 for media storage and developed the front end using React.js with hooks to ensure a seamless and responsive user experience.

Unichat - Chatting app like messenger

- Developed a fully functional chatting app that hosts chats using chat engine API.
- User authentication for secure login is done using Firebase.
- Front-end is built using React.js for interactive user interface experience.

Blogging website

- Created a blogging website where users can write and read blogs.
- Integrated MongoDB for data storage and used React.js for front-end rendering.
- User authentication is done to ensure secure login.
